

## IMPORTANT!

Water service to your property will be turned off on ~

\_\_\_\_\_  
Date Time  
Reason: SERVICE LINE REPAIR

**PLEASE NOTE: CANCELLATION OR TIME MODIFICATION DUE TO UNFORESEEN CIRCUMSTANCES MAY OCCUR AT THE LAST MINUTE WITHOUT PRIOR NOTIFICATION.**

**Water outages on the District's mainline reduce pressure in the home and may drain hot water tanks not installed with proper safety devices. Precaution should be taken to prevent this drainage.**

Gas Water Heaters: Normally will not be affected when the temperature rises; they shut off automatically. As a precaution, you can shut off the cold water inlet valve and turn the gas switch to "pilot." Resetting the gas valve to normal is your responsibility. Contact your plumber or gas supplier for additional information.

Electric Water Heaters: As a precaution, you should turn off the breaker switch at the electrical panel box or shut off the cold water inlet valve at the hot water tank. Reverse the procedure when water service is restored. Contact your plumber or Pacific Gas & Electric Company (PG&E) for additional information.
